
(a) NIFTY 50 daily returns: heavy-tailed (excess kurtosis 21)
standardised daily log return
normal quantile
(b) Noise of one BO evaluation y(L) at fixed L
L = 10: excess kurtosis 0.8
L = 60: excess kurtosis -0.1
L = 150: excess kurtosis 3.1
standardised evaluation noise
normal quantile
(c) One BO data set: n = 30 evaluations
excess return over buy-and-hold (% p.a.)
f(L): average over all 2-year windows
GP
TP
GP-t
30 noisy evaluations
moving-average look-back L (trading days)
(d) Next evaluation proposed by each surrogate
GP: next L = 61
TP: next L = 61
GP-t: next L = 61
EI (scaled to max 1)
look-back L
